ABSTRACT:

PURPOSE: To provide a coating glass having the outermost layer consisting of a layer coated with a coating agent containing a specific polyfluoride compound, effective to reject the application of a sticker, etc., facilitating the peeling of the sticker if applied, and leaving no adhesive after peeling.

CONSTITUTION: The objective coating glass is obtained by constituting the outermost layer with a layer coated with a coating agent containing one or more polyfluorine compounds selected from pentafluorophenyl glycidyl ether,

perfluorophenyl glycidyl ether, bisphenol AF diglycidyl ether and
[perfluoro-1,3-dimethyl-2-(1-methylethyl)-1-butenyl]-oxyphthalic
anhydride.

The coating agent preferably contains a silane coupling agent.
